

Crescent[®] BRAND
RAPID VISE™

Pump up your productivity
with these new self-adjusting
locking pliers and clamps.

**COOPER** Tools

The RapidVise[®] advantage

Crescent RapidVise self-adjusting locking pliers allow users to finish jobs faster than with standard locking pliers because they automatically adjust to the thickness of the material being gripped. So instead of having to turn an adjustment knob for each piece, you just grip and go. There's no adjustment knob because the jaws adjust automatically. With RapidVise pliers work goes faster ... and faster is better.

Adjust the jaw pressure of RapidVise pliers once and they automatically maintain that pressure, regardless of the thickness of the object being gripped. RapidVise pliers have many other features as well, like the unique Crescent angled tooth pattern, a nickel-plated finish, and forged, heat-treated components.

No Adjustment Required!

Thick or Thin

Never turn a locking pliers adjustment knob again.

It stands to reason that doing away with an operation will improve productivity, and that's just what RapidVise self-adjusting locking pliers do. They've gotten rid of that time wasting "turn-the-knob, try it, turn-the-knob, try it again" routine.

Now it's just "CLICK, get-to-work!"

RapidVise clamps with swivel-pads are available for easily marred surfaces

RapidVise clamps with regular tips are available for general clamping and welding applications

Comfort and speed ... no adjustment required!

The molded RapidVise handle adds an unmatched level of comfort and control for the professional user. The durable, micro-textured grip is specially designed to provide resistance to oil, grease, and other contaminants. And added comfort and control means work gets done faster.

Catalog Number	Description
